WHY IMR IS VALUABLE REVIEW?

The Annual Internal Medicine Review (IMR) course is a high-yield intensive program designed to not only help you ace your examinations, but also to provide a relevant review for daily practice. The Annual Internal Medicine Review is designed to enhance internal medicine knowledge by offering a comprehensive update in internal medicine & its subspecialties.

Following the success of the First and Second Annual Internal Medicine Review, held in 2014 and 2017, with over 150 attendees and the ongoing demand and requests, we are delighted to announce the hosting of the Third Annual Internal Medicine Review in October 2018.

The topics represent some of the most common problems encountered in clinical practice and emphasis will be placed on the pertinent practical aspects of patient care and problems encountered in both the inpatient and outpatient setting. We are committed to making this the finest available comprehensive review of internal medicine for physicians preparing for board certification or recertification and for physicians desiring a review of state-of-the-art developments in internal medicine. The program will be conducted by distinguished members who are renowned in their fields of interest. This course is designed to actively engage participants and to provide optimal preparation for passing the exam as well as for internists who desire to improve their patient care practice.

The program has been designed and updated to reflect new developments in the field. Topics will cover current concepts and board-related issues using an organ system approach with emphasis placed on relevant clinical information. You will find our comprehensive review of internal medicine to be an outstanding educational experience. If you have any questions regarding the program, please contact us directly. We will be happy to help.

OBJECTIVES

The objective of this course is to provide a combination of comprehensive and intensive reviews and updates in Internal Medicine across various specialties including General Medicine, Geriatrics, Endocrinology, Pulmonary and Critical Care Medicine, Gastroenterology, Hematology and Oncology, Rheumatology, Nephrology, Cardiology and Infectious Diseases.

At the conclusion of this course, participants will be able to implement up-to-date strategies regarding the evaluation, diagnosis, treatment and management of many medical conditions commonly seen in the hospital or clinic.

WHO SHOULD ATTEND?

General Internists, Subspecialists, ER Physicians, Community Physicians, Family Physicians, General Practitioners, Interns and Residents in Training Programs for Internal Medicine and its Subspecialties, Other Healthcare Professionals and Medical Students.

REGISTRATION FEES

- Physicians and other Healthcare Professionals (BD 200)
